PROFESSIONAL SUMMARY

- Dedicated Hyperion Consultant with 3 years of experience in Hyperion PBCS, Essbase, Planning, testing, support, and development of applications using Client/Server technology, including Decision Support System and Multi-Dimensional Databases.
- Proficient in data integration, system administration, business rule development, automation, infrastructure management, and user support. Strong problem-solving skills with a focus on optimizing financial systems and processes.
- Experienced in developing custom automation scripts, API integrations, performance tuning, and real-time reporting solutions to enhance business efficiency.
- Strong understanding of three-tier architecture, EAS admin server, and different Essbase server threads.
- Extensive experience with Hyperion PBCS cloud environment, performing metadata builds, data loads (manual and automated via FDMEE), and managing LCM backups.
- Expertise in infra and admin activities, including patching, maintenance, and security configurations.
- Hands-on experience with partitioning (Transparent & Replicated) and linked partitions.
- Strong knowledge of UDA's (User Defined Attributes) for data-specific views and Dynamic Time Series analysis for Actual, Budget, and Forecast values.
- Proficient in hourglass optimization concepts, hot-cold backup strategies, and infrastructure health checks.
- Experience with financial workflow approval stages and process automation.
- Developed custom business rules, calculations, dashboards, and data automation scripts for enhanced system performance.
- Designed and implemented batch scripting, EPM Automate solutions, and API integrations to improve process efficiency.
- Developed real-time reporting solutions using Financial Reporting (FR) and SmartView dashboards.
- Managed user provisioning, access control, and security compliance as per business policies.

SKILLS

OLAP Tools	Hyperion Planning, Hyperion Essbase and PBCS
Reporting Tools	SmartView
Data Integration	FDMEE, LCM backups, metadata import/export
Automation & Scripting	Batch scripting, EPM Automate, API Integration
Infrastructure Management	System health checks, backups, patching, security roles
Financial Workflows	Approvals, task lists, and data reconciliation
Troubleshooting & Support	Debugging metadata, data loads, and business rules

WORK HISTORY

Environment: Oracle Hyperion Planning, Essbase and PBCS

- **Employer 1:** Experis IT Pvt Ltd
Duration: April 2022 – February 2025
- **Employer 2:** Outworks Solutions Pvt Ltd
Duration: March 2025 – April 2025

Project: Vodafone Idea Ltd

Role: Hyperion Consultant

Vodafone Idea Limited is a leading Indian telecom operator providing 2G, 3G, 4G, and VoLTE services with a subscriber base of over 228.60 million. The company was formed in 2018 by merging Vodafone India and Idea Cellular.

Responsibilities:

Project 1: Hyperion Support & Administration (April 2022 – March 2024)

Key Responsibilities:

- Designed and developed Oracle Cloud PBCS applications for financial planning and analysis.
- Conducted morning system health checks, including batch monitoring, backup status verification, and infrastructure assessments.
- Led application artifact migrations from Test to Production environments, ensuring minimal downtime and accuracy.
- Created and optimized business rules and forms for improved performance and usability.
- Designed and implemented interactive dashboards and FR Reports in PBCS to support decision-making.
- Provided troubleshooting support, resolving user-reported issues related to data inconsistencies and metadata updates.
- Configured security policies in PBCS, granting access based on business needs while maintaining compliance.
- Assisted users with SmartView installations and troubleshooting connectivity issues.
- Automated business rule execution and data aggregation to streamline daily processing workflows.
- Developed and optimized calculation scripts based on evolving business requirements.
- Designed and implemented batch scripts and automation solutions using EPM Automate, reducing manual efforts.
- Managed the ticketing system, handling Change Requests, monitoring issue resolutions, and ensuring timely closure.

Project 2: Hyperion Development & Automation (April 2024 – Present)

Key Responsibilities:

- Designed and developed custom business rules, dashboards, and automation workflows.
- Implemented EPM Automate scripting for batch jobs, data loads, and metadata updates.
- Optimized Hyperion performance tuning for improved processing efficiency.
- Created custom reports using Financial Reporting (FR) and SmartView dashboards.
- Engineered dynamic time series reports, enhancing real-time data analytics.
- Spearheaded Hyperion security improvements, ensuring compliance and user access management.
- Automated partitioning strategies, enhancing data segregation and accessibility.

EDUCATION

Bachelors: Electronics and communication Engineering,
Vasireddy Venkatadri Institute of Technology.
