

JOB DESCRIPTION

Job Title	Sr Platform & DevOps Engineer	Job Code	NA
Alternate Job Title			
Business/Function	Infrastructure & DevOps	Career Level	NA
Segment	NA	Chargeable/ Non-Chargeable	NA
Market	NA		

APPROVALS

For Internal Use Only: This section should only be completed by a member of the Total Rewards COE

Manager Approval	NA	NA
HR Approval	NA	NA

POSITION SUMMARY

In just a few sentences, broadly describe the main purpose of the job. Indicate what is done and why (outcome). i.e., answer the question, "Why does the job exist?"

The Senior Platform & DevOps Engineer position will require heavy hands-on work on one or more public cloud platforms leveraging several PaaS and marketplace services. This position will play a key role in the configuration, implementation, monitoring and troubleshooting of platform components, which include (but not limited to) networking, VMs, API management services, Application Gateways, Load Balancers, Kubernetes clusters etc. The Senior Engineer will be expected to write code that bridges the gap between application and infrastructure using tools like Terraform and test the system to be reliable, scalable and resilient. He / she will develop and run diagnostics tests to verify the correct design of platform, which usually means writing code for diagnostics so that the testing of the platform takes place automatically. The individual is expected to collaborate and operate in parallel with the application Engineers.

ESSENTIAL JOB RESPONSIBILITIES

List and describe the position's key responsibilities in order of importance, and indicate the approximate percentage of time spent on the responsibility. (Percentages must add up to 100%.) For each, describe in simple terms what the job holder must do to accomplish the main purpose of the job and the amount of direction that is required to perform the job duties. If the job manages others, describe the management duties (including authority to hire/fire/recommend pay increases/manage overall work product/schedule, etc.) Insert additional rows as needed.

Note: These statements are not intended to be an exhaustive list of all responsibilities and duties.

	Responsibility	% of time spent
1	Technical Designing, implementing, and managing Azure-based cloud infrastructure to ensure scalability, performance, and security.	90%

	• Collaborating with cross-functional teams to deploy and maintain cloud services and resources. • Monitoring, optimizing, and troubleshooting Azure environments to ensure high availability and cost-effectiveness. • Technical Expertise with Microsoft Azure including foundational services such as Virtual Networks, Virtual Machines, Storage, Load Balancer, Azure Active Directory, App Service, Azure SQL Database, Azure Service Bus, Application Gateway, Azure Redis Cache, Cosmos DB etc. • Developing and maintaining GitLab CI/CD /Azure DevOps pipelines for continuous integration and deployment. • Automating software build, testing, and deployment processes to accelerate software delivery. • Collaborating with development teams to enhance CI/CD practices and tools. • Setting up, configuring, and managing AKS clusters for container orchestration and management. • Implementing best practices for deploying and scaling containerized applications. • Monitoring and ensuring the reliability and performance of AKS environments. • Integrating Cloudflare services to enhance the security, performance, and scalability of web applications. • Configuring and managing DNS, CDN, and DDoS protection solutions using Cloudflare. • Collaborating with cybersecurity teams to implement robust security measures. • Implementing and configuring monitoring solutions using tools such as New Relic, Splunk, and Dynatrace. • Creating dashboards and alerts to proactively identify and address performance and security issues. • Analyzing monitoring data to optimize system performance and resource utilization. • Utilizing Infrastructure as Code tools such as Terraform /ARM templates/python/bash/PowerShell for infrastructure provisioning and automation. • Maintaining version-controlled IaC scripts for infrastructure changes and updates.	
2	Mentoring • Mentor and guide junior members of team	10%
TOTAL:		100%

POSITION SCOPE

Provide quantitative and qualitative information related to the position's scope and job impact. If not applicable, indicate "n/a".

Revenue generation / asset management accountability	Individual revenue accountability (i.e., personal revenue goal)	Nil
	Team revenue accountability (i.e., total revenue for team(s) under the position's management)	Nil
Management responsibility (i.e., hiring, coaching, scheduling / delegating work, performance reviews)	Number of direct reports	0
	Total reports (Direct and indirect)	0
Project management (i.e., indirect management of project teams) Note: If you provide information to this section you must also itemize the Project Mgmt responsibilities in the 'Essential Job Responsibilities' Section	Typical project team size	N/A
	Manages multiple projects? (Yes/No)	N/A
	Percentage of time spent on project management	0%
Scope of Responsibility	Categories: Domestic (locations within a country or neighboring countries with similar culture) Regional Continental region (e.g. Europe, Asia, North Amer., Latin Amer, Middle East) Global (All regions of the world)	Please indicate the scope of the job: Global

KNOWLEDGE, SKILLS AND ABILITIES

Indicate the education level, previous experience, specific knowledge, skills and abilities required to meet minimum requirements for this position.

Education	4-year degree in computer science, Information Technology, or related field
Experience	<i>Minimum</i> 7+ years' experience in designing and managing Azure-based cloud infrastructure. <i>Minimum</i> 4+ years' experience in GitLab CI/CD pipelines and version control. - In-depth knowledge of AKS and containerization technologies.

	• Experience with Cloudflare or similar CDN and security services. • Proficiency in Infrastructure as Code tools (Terraform, ARM templates, etc.). • Expert knowledge with monitoring and observability tools like New Relic, Splunk, and Dynatrace. • Excellent problem-solving and troubleshooting skills. • Strong communication and teamwork abilities.
Knowledge and skills (general and technical)	Technical Skills: Level of competency 3 on a scale of 5 for skills mentioned below. • Cloud Provider: Azure ○ Core Services: Elasticpool, SQL, Application Gateway, API Management (APIM), Key Vaults, AKS (Azure Kubernetes Service), VMSS (Virtual Machine Scale Sets), VM ○ Networking: NSG (Network Security Groups), Private Endpoints, Private Linked Service, VNet, Subnets, WAF (Web Application Firewall), GeoReplication ○ Storage: Storage Accounts ○ Messaging and Events: EventHub, EventGrid, Azure Service Bus (Namespaces, Queues, Topics) ○ Identity and Security: Managed Identities/Workload Identities, Private DNS, Auth0 • Containerization and Orchestration: ○ Kubernetes (K8s): For container orchestration ○ Helm: For Kubernetes package management ○ Docker: For containerization • Infrastructure as Code (IaC): ○ Terraform • CI/CD: ○ GitLab: CI/CD pipeline management for continuous integration and deployment ○ Azure DevOps

	- Monitoring and Observability: - New Relic / Splunk - Automation and Scripting: - PowerShell - Python
Other requirements (licenses, certifications, specialized training)	Good to have certifications – - Certified Kubernetes Administrator - AZ-104 (Microsoft Certified: Azure Administrator Associate) - AZ-700 (Microsoft Certified: Azure Network Engineer Associate) - HashiCorp Certified: Terraform Associate (003) - AZ-305: Designing Microsoft Azure Infrastructure Solutions

WORKING RELATIONSHIPS

Indicate the primary internal and external contacts with whom the position interacts on a regular and recurring basis, and the purpose / nature of the relationship. If not applicable, indicate "n/a".

Internal contacts (and purpose of relationship)	- Digital Engineering - Restaurant Engineering - Tech Ops - Data Engineering - Quality Engineering - Database Engineering - Enterprise Architecture - Platform Architecture and Governance - Cyber Security/Security - Cloud Infrastructure - Network Engineering Purpose of interaction is directly/indirectly related to Project and Engineering work Platform & DevOps Team is expected to accomplish.
External contacts (and purpose of relationship)	OEMs (Microsoft, Gitlab, Cloudflare, Okta)

ORGANIZATION STRUCTURE

Indicate the reporting relationship of this position to others in the business / function. If not applicable, indicate "n/a".
