

JOB DESCRIPTION

Job Title	Sr Site Reliability Engineer	Job Code	NA
Alternate Job Title			
Business/Function	Infrastructure & DevOps	Career Level	NA
Segment	NA	Chargeable/ Non-Chargeable	NA
Market	NA		

APPROVALS

For Internal Use Only: This section should only be completed by a member of the Total Rewards COE

Manager Approval	NA	NA
HR Approval	NA	NA

POSITION SUMMARY

In just a few sentences, broadly describe the main purpose of the job. Indicate what is done and why (outcome). i.e., answer the question, "Why does the job exist?"

Site Reliability Engineering (SRE) combines software and systems engineering to build and run large-scale, distributed, fault-tolerant systems enabling online ordering for thousands of restaurants across multiple brands. SRE ensures that Inspire Digital Platform (IDP) services have reliability, uptime appropriate to users' needs and a fast rate of improvement. Additionally, SRE's will keep an ever-watchful eye on our systems capacity and performance. SRE is also responsible to perform regular capacity planning exercise. Much of our software development focuses on optimizing existing systems, building infrastructure and eliminating toil through automation.

ESSENTIAL JOB RESPONSIBILITIES

List and describe the position's key responsibilities in order of importance, and indicate the approximate percentage of time spent on the responsibility. (Percentages must add up to 100%.) For each, describe in simple terms what the job holder must do to accomplish the main purpose of the job and the amount of direction that is required to perform the job duties. If the job manages others, describe the management duties (including authority to hire/fire/recommend pay increases/manage overall work product/schedule, etc.) Insert additional rows as needed.

Note: These statements are not intended to be an exhaustive list of all responsibilities and duties.

	Responsibility	% of time spent
1	Technical - Review current workload patterns, understand the business case and prioritize areas of weakness within the platform through log and metric investigation as well as application profiling. - Work with senior engineering and testing team members to build tools and recommend testing strategies for problem prevention, detection.	100%

	• Employ deep troubleshooting skills to improve the availability, performance, and security to ensure services are designed with 24/7 availability and operational readiness and rigor. • Perform in depth postmortem on production incidents, to assess effective business impact and for Engineering to learn from these. • Create Dashboards and alerts for Monitoring the IDP platform, define key metrics and service level indicators and ensure relevant metric data is collected to create actionable alerts for SRE and Network Operation Center. • Participate in the 24/7 on call rotation. • Automate toil, by building software and automation for seamless application deployment and third-party tool integration. • Ensure the platform holds a high degree of reliability, at least three 9s. • Define non-functional requirements as part of the product lifecycle to influence the new designs, standards, and methods for scalable, highly available distributed systems • own technically intricate issues that cross between DevOps, Databases, Networking, Code, Infrastructure and people; drive them to satisfactory completion. • Provide recommendations and feedback in design reviews and review sessions.	
TOTAL:		100%

POSITION SCOPE

Provide quantitative and qualitative information related to the position's scope and job impact. If not applicable, indicate "n/a".

Revenue generation / asset management accountability	Individual revenue accountability (i.e., personal revenue goal)	Nil
	Team revenue accountability (i.e., total revenue for team(s) under the position's management)	Nil
Management responsibility (i.e., hiring, coaching, scheduling / delegating work, performance reviews)	Number of direct reports	0
	Total reports (Direct and indirect)	0
Project management (i.e., indirect management of project teams) Note: If you provide information to this section you must also itemize the Project Mgmt responsibilities in the 'Essential Job Responsibilities' Section	Typical project team size	N/A
	Manages multiple projects? (Yes/No)	N/A
	Percentage of time spent on project management	0%

Scope of Responsibility	Categories: Domestic (locations within a country or neighboring countries with similar culture) Regional Continental region (e.g. Europe, Asia, North Amer., Latin Amer, Middle East) Global (All regions of the world)	Please indicate the scope of the job: Global
--------------------------------	---	---

KNOWLEDGE, SKILLS AND ABILITIES

Indicate the education level, previous experience, specific knowledge, skills and abilities required to meet minimum requirements for this position.

Education	4-year degree in computer science, Information Technology, or related field
Experience	- Minimum 7+ years of experience as a Software Engineer, Platform, SRE or DevOps engineer supporting large scale SAAS Production B2C or B2B Cloud Platforms. - Hands-on problem-solving and troubleshooting
Knowledge and skills (general and technical)	- Minimum 7+ years of experience as a Software Engineer, Platform, SRE or DevOps engineer supporting large scale SAAS Production B2C or B2B Cloud Platforms. - Development skills, Java, TypeScript, python, OOP expertise is a must. - Hands on Azure Cloud experience particularly with AKS, API management, Azure Cache for Redis, Azure Blob Storage, Cosmo DB, Service Bus, Azure Functions. - Proficiency in monitoring, APM and profiling tools, New Relic, Splunk, Prometheus, Grafana. - Working experience with containers, Kubernetes and Helm. - Functional knowledge of Cloud Network, Firewalls, Ingress and Egress controllers, Service Mesh and - experience with Auth0 Secret management and Cloudflare, CDN, Load Balancer, Cache, Firewall, worker features. - Experience with ArgoCD, GitLab, CICD, Terraform , Infrastructure as Code.

	• Strong communication skills and ability to explain technical concepts clearly • A willingness to dive into understanding, debugging, and improving any layer of the stack Technical Skills: Level of competency 4 on a scale of 5 for skills mentioned below. • Cloud Provider: Azure ○ Core Services: Elasticpool, SQL, Application Gateway, API Management (APIM), Key Vaults, AKS (Azure Kubernetes Service), VMSS (Virtual Machine Scale Sets), VM ○ Networking: NSG (Network Security Groups), Private Endpoints, Private Linked Service, VNet, Subnets, WAF (Web Application Firewall), GeoReplication ○ Storage: Storage Accounts ○ Messaging and Events: EventHub, EventGrid, Azure Service Bus (Namespaces, Queues, Topics) ○ Identity and Security: Managed Identities/Workload Identities, Private DNS, Auth0 • Containerization and Orchestration: ○ Kubernetes (K8s): For container orchestration ○ Helm: For Kubernetes package management ○ Docker: For containerization • Monitoring and Observability: ○ New Relic / Splunk • Automation and Scripting: ○ PowerShell ○ Python
Other requirements (licenses, certifications, specialized training)	Good to have certifications – • Certified Kubernetes Administrator/Developer • AZ-104 (Microsoft Certified: Azure Administrator Associate)

	AZ-305: Designing Microsoft Azure Infrastructure Solutions

WORKING RELATIONSHIPS

Indicate the primary internal and external contacts with whom the position interacts on a regular and recurring basis, and the purpose / nature of the relationship. If not applicable, indicate “n/a”.

Internal contacts (and purpose of relationship)	- Digital Engineering - Restaurant Engineering - Tech Ops - Data Engineering - Quality Engineering - Database Engineering - Enterprise Architecture - Platform Architecture and Governance - Cyber Security/Security - Cloud Infrastructure - Network Engineering Purpose of interaction is directly/indirectly related to Project and Engineering work Platform & DevOps Team is expected to accomplish.
External contacts (and purpose of relationship)	OEMs (Microsoft, Gitlab, Cloudflare, Okta)

ORGANIZATION STRUCTURE

Indicate the reporting relationship of this position to others in the business / function. If not applicable, indicate “n/a”.
