

PURPOSE OF THE POSITION

Job Summary

A technical role providing support of technology solutions that are complex in nature and related to Oracle Cloud (SaaS and Paas) ERP environment for the core financial applications (GL, AP, AR, FA, Purchasing, Projects, Expenses) integration with various boundary systems including some on-premise and cloud applications. The role will work with the business to understand requirements to determine the best options for implementing solutions within the OCI , PaaS and SaaS environments to align with the Inspire multi-brand model. This role will be split (70/30) between support of the production environment and working on projects and enhancements. This person should be able to think strategically and understand the bigger picture when developing solutions.

RESPONSIBILITIES

- Technical experience required, to effectively work with large & complex implementations of Oracle Cloud ERP for daily support and project implementations
- Experience with OCI administration, configuration, and integration with other Oracle and non-Oracle systems
- SSO implementations using SAML 2.0, OpenID Connect, and other protocols.
- Ability to configure and manage federated identities between OCI and other identity providers.
- Communicates with users; utilize the support ticketing system to review and assess the scope of the problem
- Manage and optimize OCI resources to ensure cost-efficiency while meeting performance requirements.
- Collaborate with cross-functional teams to identify and address infrastructure-related issues.
- Creating and maintaining integrations between Oracles Cloud and third-party boundary system using OICS using different orchestration.
- Develop/Support OICS/APXE/VBCS based custom applications
- Installs or assists with the installation and testing of Oracle hot-fixes and patches
- Maintains and documents support services provided in the ticketing system or other appropriate knowledge databases
- Gather and document business requirements in order to identify appropriate product features for implementation.
- Develop and design a strategy for integrating configuration and development activities into integrated project plan for implementation.
