~Azure DevOps~Azure~AWS~Devops~Software Configuration Management ~ Build & Release Management ~CI/CD ~ Environment ~ Application Support

Job Objective

Seeking a challenging role as an SRE and Azure DevOps Engineer where I can leverage my expertise in CI/CD automation, cloud infrastructure management, and Infrastructure as Code (IaaS) using Terraform and Kubernetes to streamline software delivery and enhance operational efficiency.

Professional Experience

- Working as a **SRE (Site Reliability Engineering)** at **INFINEXT TECHNOLOGIES**, **HYDERBAD** from August 2024 to till date.
- Working as a **Cloud infrastructure and SRE Engineer** at **UST Global**, **Hyderabad** from July 2021 to July 2023.
- Worked as a **DevOps and Cloud Engineer** at **DHANUSH INFOTECH**, **Hyderabad** From August 2018 to July 2020.
- Worked as a **DevOps Engineer** at **Abhyudaya HR Business solutions Pvt. Ltd**, **Hyderabad** from May 2015 to 2018 August.

Experienced Summary

- Over 8+ years of IT Professional experience in DevOps and Azure DevOps, AWS, Linux Environment Configuration Management, Build and Release management.
- Hand-On experience in Implement, Build and Deployment of CI/CD pipelines, managing projects often includes tracking multiple deployments across multiple pipeline stages (Dev., Test/QA staging and production)
- Design, develop, and maintain Azure Pipelines (YAML & Classic) for automated builds, testing, and deployments.
- Implement multi-stage pipelines for development, testing, staging, and production environments.
- Implement branch policies, code review practices, and Git branching strategies Integrate Azure Pipelines with Azure Repos.
- Manage and deploy Azure resources (VMs, AKS, App Services, Storage, and Networking) through Terraform.
- Implement role-based access control (RBAC) and security best practices.
- Deploy and manage containerized applications using Azure Kubernetes Service (AKS)
- Implement automated rollback and validation mechanisms for deployments.
- Work closely with developers, QA, and operations teams to streamline CI/CD processes.
- Use Azure Boards to track work items, sprints, and releases.
- Optimize pipelines by using parallel jobs, caching, and self-hosted agents to reduce execution time.

- Implement cost-effective cloud build agents and pipeline execution strategies.
- Package management for .NET, npm, Maven, and Python.
- Proficient in implementing and managing CI/CD pipelines, overseeing deployments across multiple stages (Dev,Test/QA,staging, and production) .
- Hands on experience in creating Docker images and containers.

Skill Sets

Cloud Environment(Azure,Azure DevOps, Amazon Web Services)
DevOps (SRE)
Build & Release Management
CI (Continuous Integration)/CD (Continuous Delivery)
SCM (Software Configuration Management)

Technical Skills

Operating system	RHEL, Ubuntu, Linux, Windows
Scripting Tools	Bash, python
Databases	MySql Server,
Application Server	Tomcat, Jboss
Containerization and Orchestration	Docker, Kubernetes, AWS EKS
Version Control Tool	Git, GitHub, Bitbucket, GitLab
Continuous Integration Tool	Jenkins, GitLab CI/CD, Azure DevOps
Build Management Tools	Gradle, Maven
CM Tools	Ansible
Containerization Tool	Docker
Configuration Management & IaaS	Ansible, Terraform, CloudFormation ,ARM
Cloud Services	AWS,Azure,Azure DevOps
Monitoring Tools	Prometheus, Grafana, ELK Stack, CloudWatch

Education

- MCA from **JNT University**, Hyderabad in 2010.

Project Summary**Project # 3**

Project title	William Sonoma Cloud Migration
Team Size	8
Environment	Azure, Devops,Terraform, Docker, Jenkins, Ansible, GIT, Maven, Apache Tomcat,Shell Scripting ,ARM .
Role	Cloud infra Engineer and SRE engineer

Description:

- William Sonoma is a Consumer Retail Company in US, which sells Kitchenware's and home furnishings. This project was about migration of Monolithic application to Microservices using Kubernetes.

Roles & Responsibilities:

- Managed multiple Azure accounts with multiple VPC's for both production and non- prod where primary objectives included automation, build out, integration and cost control
- Managing Azure Infra and automation with CLI, Terraform ,ARM.
- Proficient in implementing and managing CI/CD pipelines, overseeing deployments across multiple stages (Dev, Test/QA, staging, and production).
- Storage on Azure file and automate sync data to Glacier.
- Having good knowledge and experience in infrastructure management tool Terraform.
- Experience in creating branches in GIT and provide access permissions to developers on need basis.
- Supported development sprints by automating Azure Infra provisioning using Terraform.
- Linux System Administration supporting azure builds, troubleshooting, shell scripting, backups and log file management.
- Worked on Azure monitoring services, analyzing services, alert services.
- Worked closely with azure infrastructure teams to troubleshoot complex issues.
- Managed and supported Azure Role-Based Access Control (RBAC), you to assign specific permissions to users, groups, service principals, and managed identities.
- Hands on experience in creating Docker images and containers.

- Automated troubleshooting tasks by creating Shell scripts and Azure CLI tool
- Support for Customer accounts which are hosted on Azure.
- Assisted customers with common connectivity issues by reviewing subnet, security group, ACL, routing, VPN, ELB, Auto Scaling, RDS ,ARM .

Project # 2

Project title	HDFC MF
Team Size	2
Environment	AWS, DevOps, Ansible, Docker, Jenkins, GIT,Maven, Shell Scripting
Role	Cloud Engineer

Description:

HDFC Mutual Fund is one of the largest mutual funds and well-established fund house in the country with focus on delivering consistent fund performance across categories since the launch of the first scheme(s) in July 2000.

Roles & Responsibilities:

- Supporting for Git version control system merging, hooks, branching the files and creation of repos.
- Working on Amazon EC2 cloud computing Ubuntu Linux, tomcat application deployment using Ansible.
- Jenkins administration to user access credentials, deployment email notification configuration for new users and using matrix plugins to manage Jenkins.
- Supporting configuration of Jenkins Build pipeline jobs, plugins installation with team for configuration of maven multi module jobs, free style jobs.
- Enabling customers to better manage software development, deployments and infrastructure with tools such as Ansible, Jenkins and GitHub.
- Designed, configured and deployed Amazon Web Services for a multitude of applications utilizing the Amazon Web Services focusing on high-availability, fault tolerance and auto-scaling.
- Managed Amazon Web Services (AWS) infrastructure with automation and configuration management tools such as Ansible.
- Wrote Ansible Playbooks to configure Apache Tomcat, and different web application to improve performance.
- Creating Maven POMs to automate build process for new projects, integrating them with third party tools including SonarQube, Nexus.
- Developed and implemented Software Release Management strategies for various applications according to the agile process.
- Developed build and deployment scripts using ANT/Maven as build tools and Jenkins as automation tool to move from one environment to other environment.

- Worked with Docker containers which are lightweight and fast for reducing the cycle time of development, testing, and deployment.
- Configuring the **Docker** containers and creating docker files for different environments.
- Used Docker environment host inside of a Docker host (Docker-in- Docker) for their build environments.

Project # 1

Project title	Agency Gateway
Team size	2
Environment	DevOps, Docker, Linux, SVN, Ant, Tomcat and Jenkins
Role	DevOps Engineer

Description:

The Allstate Corporation is the second largest personal lines insurer in the United States and the largest that is publicly held. The company also has personal lines insurance operations in Canada. At Allstate, we want to make doing business with us easy and enjoyable to the agents. For that reason a website is designed exclusively for agents named Agency Gateway.

The agent Website allows agents to view current information an online format available 24 hours a day. Commission policy and product information are all available on the site. In addition, agents can submit service requests and view detailed information regarding their business. The website also allows to access to the supply manual containing sales, support material, applications, any underwriting forms and any state required forms. As an agent, you can supply order through the website increasing efficiency and ensuring to use the most up to date material.

Roles & Responsibilities:-

- Managed to organizational standards by maintaining the source code in SVN for various applications. Setting up the new Build Environment for various products in Linux Environment.
- Installed and Administered Jenkins CI for ANT Builds and implemented LDAP authentication for Jenkins and User Management for Jenkins CI.
- Developed and supported the Configuration and Build Management Processes and procedures
- Used Maven for building the artifacts and also administered the Maven Build scripts.
- Installation, Configuration and Administration of Jenkins over UNIX and LINUX build machines in distributed mode over Apache Tomcat and configured jobs along with various plug-in for Continuous Integration, Release Builds for AGILE and Production Branches.
- Worked on Jenkins for builds and deployment using Ant scripts.
- Involved in branching, Tagging of code delivery at required releases. Installing and configuring Subversion, Jenkins/Hudson and deployment servers.
- Involved to create the Repository in SVN in Linux Environment. Involved to run the Build.xml file in Linux Environment.
- Knowledge of developing the build management scripts and framework

- Involved in scheduling the automated build called Nightly Builds and Managing Daily Builds, Weekly Builds, Nightly Builds.
- Compilation and runtime issues in Build failures, identifying build breaks and reporting to development team and Interacting with developers to sort out issues related to Build Automation.
- Configure Hudson/Jenkins Jobs for nightly and Milestone builds involved in scheduling the automated build called Nightly Builds.

Declaration

- ❖ I hereby declare that the details stated above are authentic to the best of my knowledge and I shall provide the originals of the same when required.
